

PATHWAY NAVIGATION

Navigate sidewalks faster and safer without barriers.

Every single person's journey begins and ends on the sidewalk. See the condition of your sidewalk routes before you leave the house. Our real-time, turn-by-turn pedestrian navigation app allows you to move more independently and travel to your destination with greater confidence.

Turn by turn sidewalk navigation customized to your unique pedestrian comfort level

With first-of-its-kind, individualized comfort-based routing, you can preview sidewalk accessibility attributes, choose the safest path around potential hazards, and receive alerts in real-time to avoid any obstructions along your journey.

Customized comfort level settings

Detailed destination and route previews

Audible real-time directions and obstruction alerts

Report obstruction locations

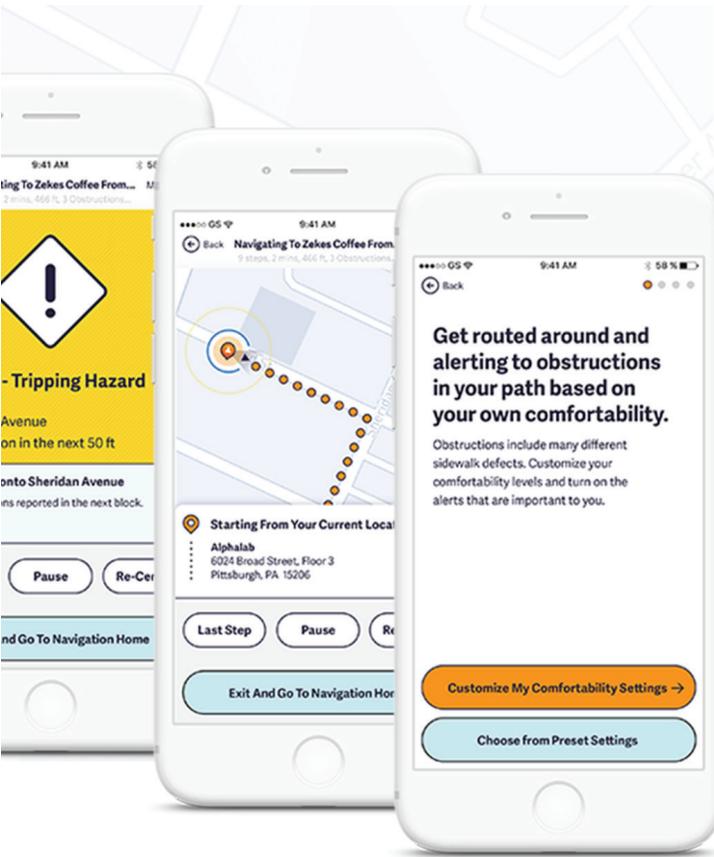

VoiceOver and TalkBack compatible

Universally designed user experience

We help increase independence, mobility, safety, and quality of life for all people, especially for those with disabilities.

Sidewalks connect us to the most important people and places in our lives. A broken, poorly designed, or missing sidewalk can result in trip/fall accidents or force pedestrians out onto the road. Poor conditions cause pedestrians to risk their health and safety, particularly for people who use wheelchairs, people who are blind, or use a cane.

Our mix of expertise, technology, data, service, partnerships, and advocacy are all part of our commitment to improving sidewalk travel for you and every pedestrian. Move more freely, arrive on time with greater confidence and with less obstructions. You deserve to have full and safe access to every public and private pedestrian path.

pathVu navigation gives you foresight into the accessibility and walkability of your pedestrian routes so you can go about your day with confidence.
